

Collection de Mediterania

PRODUCT INFORMATION

The *Collection de Mediterania* should not be mistaken for reclaimed, recycled, or antique flooring products. We produce a product that utilizes new growth timber to create an Old World look. By producing our products with new growth timber, we are able to supply you, the end user, with a higher selection in overall lengths and widths.

All flooring products are kiln dried to between 5 – 8% moisture content and are stored and manufactured in a climate controlled environment. Being a natural product, your flooring product will have seasonal movement. You should expect some shrinkage in the heating season and the amount of movement will vary depending on ambient relative humidity and temperature in your geographic location. Some species/widths are more susceptible than others.

All species are available in face widths between 3” – 7”. All solid plank products are tongue & grooved, back relieved and end matched. All solid plank products have a 2’ minimum length, an average length of 6’, and can exceed 10’ overall.

Engineered products are available in a 5 ½” single width plank, with lengths being 7’ 2 5/8” long, with a thickness of 5/8”.

Our factory controlled finishing process contains three coats of a polyurethane satin finish. All of our stains and finishes meet or exceed industry standards for V.O.C. compliance.

Please allow 7 – 10 % for cutting waste.

GRADING

All of our products, with the exception of engineered goods are produced from a rustic grade of lumber. These products will contain, but not be limited too mixed grain; variable natural color, burl, and sound filled knots.

Distressing

Our craftsmen do all scraping and distressing by hand, no machinery is involved. All products are created with a single appearance in mind; this delivers quality and consistency you can count on.
